## Problem (The "Why")

- **Current Issue:** Formulatrix's Bootcamp spans four tools: Google Classroom for materials, Google Chat for discussion, Notion for docs, and Gmail for announcements. Nothing connects them.
- **Impact:** Participants juggle four apps to follow one bootcamp. Miss a message in Chat or bury a doc in Notion, and you miss an assignment. Mentors grade in the classroom but discuss elsewhere, so they lose track of who's actually behind. Admins can't see cohort progress without manually checking all four tools.

## Proposed Solution

- **Our Approach:** One LMS that pulls together what Classroom, Chat, Notion, and Gmail do separately today: materials, submissions, grading, and progress tracking.
- **Key Value:** Participants stop switching apps. Mentors and admins see progress in one place instead of piecing it together from four sources.

## Core Features

- **Feature 1:** A learning material hub, organized by module, replacing scattered Classroom posts and Notion docs.
- **Feature 2:** Assignment submission and grading, with clear status per submission.

- **Feature 3:** A progress dashboard that mentors and admins can check without cross-referencing tools.

# High-Level Architecture & Quality Assurance

- **Architecture Pattern:** Clean Architecture strictly adhering to SOLID principles.
- **Design Patterns Used:** Repository Pattern, Dependency Injection
- **Code Quality Goal:** Must Have 0 warnings as possible (scanned via static analysis), and 100 % Unit Test Coverage.

# Identified Challenges & Risks

- **Risk 1:** Getting participants and mentors to leave familiar tools like Classroom and Notion mid-cohort, without breaking their routine.
- **Risk 2:** Building role-based access for participants, mentors, and admins that stays simple to maintain as the bootcamp grows.
